

# IRELAND: THE NEW WORLD PLAYER IN STEM CELL RESEARCH

Although few new discoveries have been made at NUI Galway's stem cell research and manufacturing center so far, this addition is important because it shows a huge technological leap for Ireland, a bright future for many patients with diseases such as diabetes, and a generally large step in the world of regenerative medicine.

## National University of Ireland, Galway

- Recent opening and licensing of stem cell research and manufacturing center
- 1st in Ireland and 1 of less than 6 in Europe

- Will produce research and clinical trials for formerly incurable ailments like arthritis, heart disease, and the limb ischemia associated with diabetes.
- As Galway becomes a hub for stem cell therapy, 70% of pharmaceutical companies develop regenerative medicine products, creating an over 1.3 billion euro industry (from 2013)
